

### Triominoes

Connect all cards by assigning terms with the same value or paragraph names to their proposition!

**Have fun!**

When you have finished the game, work on the exercises on the reverse side of the card!

**Exercise 1**

You have assigned the terms  $ax(c-b)$  and  $ax(-b)+axc$ . Explain step by step that both terms have the same value.

**Exercise 2**

You have assigned the terms  $ax(-2) \times \frac{1}{a}x(-2)$  and 4. Explain step by step that both terms have the same value.

**Exercise 1**

You have assigned the terms  $ax(c-b)$  and  $ax(-b)+axc$ . Explain step by step that both terms have the same value.

**Exercise 2**

You have assigned the terms  $ax(-2) \times \frac{1}{a}x(-2)$  and 4. Explain step by step that both terms have the same value.

**Exercise 1**

You have assigned the terms  $ax(c-b)$  and  $ax(-b)+axc$ . Explain step by step that both terms have the same value.

**Exercise 2**

You have assigned the terms  $ax(-2) \times \frac{1}{a}x(-2)$  and 4. Explain step by step that both terms have the same value.

**Exercise 1**

You have assigned the terms  $ax(c-b)$  and  $ax(-b)+axc$ . Explain step by step that both terms have the same value.

**Exercise 2**

You have assigned the terms  $ax(-2) \times \frac{1}{a}x(-2)$  and 4. Explain step by step that both terms have the same value.

**Exercise 1**

You have assigned the terms  $ax(c-b)$  and  $ax(-b)+axc$ . Explain step by step that both terms have the same value.

**Exercise 2**

You have assigned the terms  $ax(-2) \times \frac{1}{a}x(-2)$  and 4. Explain step by step that both terms have the same value.

**Exercise 1**

You have assigned the terms  $ax(c-b)$  and  $ax(-b)+axc$ . Explain step by step that both terms have the same value.

**Exercise 2**

You have assigned the terms  $ax(-2) \times \frac{1}{a}x(-2)$  and 4. Explain step by step that both terms have the same value.

**Exercise 1**

You have assigned the terms  $ax(c-b)$  and  $ax(-b)+axc$ . Explain step by step that both terms have the same value.

**Exercise 2**

You have assigned the terms  $ax(-2) \times \frac{1}{a}x(-2)$  and 4. Explain step by step that both terms have the same value.

**Exercise 1**

You have assigned the terms  $ax(c-b)$  and  $ax(-b)+axc$ . Explain step by step that both terms have the same value.
